

A complex network graph with numerous blue nodes and red directed edges. The edges form a dense, interconnected web of paths. A single green node is located in the lower-middle section of the graph, serving as a focal point within the network structure.

A complex directed graph with numerous blue nodes and red edges. The edges are directed, with arrows indicating the flow from one node to another. The graph is highly interconnected, with many cycles and paths. A single green node is located in the lower right quadrant of the graph, serving as a focal point for several incoming and outgoing edges. The overall structure is dense and non-linear.
